

## Test Report

Date and time of reporting (dd/mm/yyyy) : 12 hour format	20.04.2020;1:30:00 PM
Address of the referring facility/Hospital	SADAR HOSPITAL, BIHARSHARIF
<b>SPECIMEN DETAILS</b>	
Date of onset of illness	NA
Date & Time of sample collection	4/19/2020
Date & Time of receipt of specimen at VRDL	4/19/2020;11:30:00 PM
Condition of specimen received / Quality on arrival	Acceptable
<b>REPORTING DETAILS</b>	
Report ID	RMRI/13/2019.Cov/TS-8261

Sr. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result	
							2019-nCoV	Other Respiratory viruses
1	TS-8261	JITENDRA KUMAR MISHRA	37Y	M	Oropharyngeal Swab / Nasopharyngeal	20.04.2020	NEGATIVE	NA

Prepared by:

Checked and Approved by:

Dr. Shiril Kumar,  
Research Scientist, Virology Lab  
ICMR-RMRIMS, Patna

Dr. G. C. Sahoo  
Scientist-E  
ICMR-RMRIMS, Patna

*Note: The results relate only to the specimens tested and should be correlated with clinical findings.*

**Interpretation guidance:-**

- Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection\*
- A positive test result is only tentative, and will be reconfirmed by retesting.
- Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. \*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR

Date & Time of receipt of specimen at VRDL	4/19/2020;11:30:00 PM
Condition of specimen received / Quality on arrival	Acceptable
<b>REPORTING DETAILS</b>	
Report ID	RMRI/13/2019.Cov/TS-8275

Sr. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result	
							2019-nCoV	Other Respiratory viruses
1	TS-8275	KABITA KUMARI	45Y	F	Oropharyngeal Swab / Nasopharyngeal	20.04.2020	NEGATIVE	NA

Prepared by:

Checked and Approved by:

Dr. Shiril Kumar,  
Research Scientist, Virology Lab  
ICMR-RMRIMS, Patna

Dr. G. C. Sahoo  
Scientist-E  
ICMR-RMRIMS, Patna

*Note: The results relate only to the specimens tested and should be correlated with clinical findings.*

**Interpretation guidance:-**

- Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection\*
- A positive test result is only tentative, and will be reconfirmed by retesting.
- Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. \*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR

ICMR-RMRIMS, Patna

Dr. G. C. Sahoo  
Scientist-E  
ICMR-RMRIMS, Patna

*Note: The results relate only to the specimens tested and should be correlated with clinical findings.*

*Interpretation guidance:-*

- *Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.*
- *A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection\**
- *A positive test result is only tentative, and will be reconfirmed by retesting.*
- *Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. \**
- *A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.*
- *Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR*

<b>REPORTING DETAILS</b>	
Report ID	RMRI/13/2019.Cov/TS-8303

Sr. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result	
							2019-nCoV	Other Respiratory viruses
1	TS-8303	DIGVIJAY SINHA	34Y	M	Oropharyngeal Swab / Nasopharyngeal	20.04.2020	NEGATIVE	NA

Prepared by:

Checked and Approved by:

Dr. Shiril Kumar,  
Research Scientist, Virology Lab  
ICMR-RMRIMS, Patna

Dr. G. C. Sahoo  
Scientist-E  
ICMR-RMRIMS, Patna

*Note: The results relate only to the specimens tested and should be correlated with clinical findings.*

*Interpretation guidance:-*

- *Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.*
- *A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection\**
- *A positive test result is only tentative, and will be reconfirmed by retesting.*
- *Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. \**
- *A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.*
- *Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR*

## Test Report

Date and time of reporting (dd/mm/yyyy) : 12 hour format	20.04.2020;1:30:00 PM
